Subject: GTL FUEL TEST

From April 12, 2002 through May 11, 2002 approximately 7,500 gallons of Gas To Liquid (GTL) diesel fuel was distributed from the Caltrans bulk fuel site in Stockton. During that period 69 different Caltrans units fueled at the Stockton site. The 69 units were comprised of 46 different Maintenance Classes ranging from $\frac{3}{4}$ pickups to class 8 tractors along with various construction units. During the test period none of the units experienced fuel-related problems. Nor have we experienced fuel-related problems since converting back to Ultra Low Sulfur Diesel.
